

Vision:

“Caritas Takeo Eye Hospital -CTEH is to be an agent in reducing poverty by providing Compassionate, quality, tertiary care with efficiently trained staff and equipped with appropriate ophthalmic equipment, instruments and medicines”

CTEH, a Comprehensive Eye Care program has been the single largest eye care program in the country since 1997. To attain the vision, the program provides quality diagnostic, curative and rehabilitative eye care in order to eliminate preventable and treatable blindness, train eye personnel in provision of quality eye care and conduct research relevant to eye conditions in Cambodia and neighboring countries.

Takeo Eye Program is being a member of

-  International Agency Prevention of Blindness (IAPB)
-  Resource mobilization of Caritas Cambodia
-  Technical working group of National Program of Eye Health
-  Provincial Technical Working Group for Health (Pro-TWGH)
-  Child working group committee in Takeo Province
-  Caritas Management committee.

Regain a happy life after successful cataract surgery at Takeo Eye Hospital

Mr. You Khan, was able to clearly see after successful cataract surgery on his both eyes at Takeo Eye Hospital. A 63 year old farmer, **Mr. You Khan**, is married with four sons and one daughter in Krosangpol Village, Taoh commune, Kirivong district, and Takeo province. His house is located around 76 km from CTEH. He is a farmer and actively does farming and running a small business to support his extended family. Life was not tough because he was able to make more income. However, things has changed after he was inactive periodically due to present of blind to disturb his vision for last 3 years (Cataract both eyes) . Life became difficulties, he could not see things clearly and unable to do his routine work such as on farming, doing small business, riding a motorbike and other daily activities.

He kept on searching for a place to get his eyes well-treated until he came into the mobile eye screening of CTEH which was held in his commune on March, 20th 2017. It was for the first time he had been properly consulted and checked-up. He was told that his both eyes had cataracts. The ophthalmologist strongly recommended that his both eyes must be operated to remove cataract out, so his vision could be restored and he could see.

He agreed and accepted operation procedures after had been received a clear explanation by the social counselors that support subsidy by Wilde Ganzen and ABC tissue vision. The process of his left eye operation went well, he had to stay overnight after operation. A day later, his eye pad was removed out and to keep his left eye slightly opened for visual acuity (VA) for testing to ensure that his vision was restored and able to see clearly. After completion of testing, he was allowed to look around and he said that he can see clearly. He is so much thankful to CTEH staff and donors that helped to make his life better. *“My happy life is returned as I could see thing clearly. Presently, I could do what I used to do, working in the rice field, drive motorbike and perform daily work”*, said **Mr. Khan**.
